SUMMARY

Backend Developer with **4.5+** years of experience building scalable services using **Node.js, PHP, and TypeScript**. Skilled in **REST API development, cloud infrastructure (AWS)**, and **database design**, with a track record of improving system performance, engineering velocity, and business conversion rates. Experienced in leveraging **AI-powered development** tools to accelerate delivery and improve code quality.

SKILLS

Backend Development | Node.js, TypeScript, JavaScript, Express.js, PHP, Laravel, CodeIgniter, REST APIs

Cloud & DevOps | AWS (S3, EC2, Lambda, CloudWatch), Docker, CI/CD

Frontend Development | React, HTML, CSS, JavaScript, Bootstrap

Database | MySQL, MongoDB

Testing & Tools | Unit Testing, Git, GitHub, Postman, Kafka, Jira

AI-Assisted Development | Claude Code, Cursor

WORK EXPERIENCE (4.5+ YEARS)

People Interactive (Shaadi.com) - Mumbai
(Software Engineer III)

May 2024 - Present

Node.js, AWS Lambda, PHP, Laravel, TypeScript, React, Docker, Jira

- Owned the design and development of key backend and product features based on business requirements, improving user experience, increasing engagement, and contributing to higher business conversion rates.
- Leveraged AI-powered development tools such as Cursor and Claude Code to automate repetitive engineering workflows, improve unit-test coverage, accelerate development cycles, and increase sprint delivery velocity.
- Integrated end-to-end **WhatsApp** calling and messaging capabilities into the in-house Response Panel, enabling advisors to seamlessly communicate with users via WhatsApp.
- Developed **tracking** and **analytics** reports to provide stakeholders with actionable performance insights and support data-driven decision-making.
- Migrated the existing Laravel codebase to **TypeScript**, improving code maintainability, type safety, scalability, and long-term development efficiency.
- Contributed to **backend architecture** and engineering practices with a focus on building scalable, maintainable, and reliable services capable of supporting high-traffic product workloads.

NileeGames Future And Technology - Mumbai
(Backend Developer)

August 2022 - May 2024

Node.js, PHP, CodeIgniter, HTML, CSS

- Developed and implemented prize distribution logic for high-stakes **real-money** games such as Quiz Time and Clubhouse (Taarak Mehta Ka Ooltah Chashmah), ensuring seamless and fair reward allocation.
- Created comprehensive report pages with embedded logic for GST, TDS, prize distribution, and game reports to accurately track financial transactions and performance metrics for real-money gaming platforms.

- Collaborated closely with the Unity developer team to deploy PHP-built APIs for seamless integration into the Clubhouse and Quiz Time platforms.
- Played a key role in migrating the complete backend of tmkocplay.com to a new frontend, enhancing user experience and overall site performance.
- Implemented a secure file storage system using **AWS S3 buckets** to manage and serve images and game APKs for high-stakes real-money games, ensuring data security and reliability.
- Developed and launched a dynamic web application for the Croma Store Event, supporting 200,000+ monthly visitors.
- Implemented **Google** and **WhatsApp** authentication for tmkocplay.com.
- Spearheaded development of "GullyTeam," an in-house sports tournament organizer app, designing features to create tournaments, manage participants, and track records — improving organizational efficiency.

Take It Ideas Innovative Solutions – Nagpur (Intern)

January 2022 – August 2022

PHP, HTML, CSS , IoT

- Built a secure web-based voting portal for RTMNU Nagpur University Senate elections, ensuring transparent and accessible voting for students and faculty.
- Engineered an RFID-based attendance system to streamline and automate attendance tracking, improving operational efficiency.
- Led training and peer-mentoring initiatives for graduate students, fostering a collaborative, knowledge-sharing culture.

EDUCATION

Bachelor of Engineering — Electrical Engineering

2017–2021

KDK college of Engineering Nagpur

PROJECTS

Frontend Project

- <https://nikhilghagre.github.io/day1/>
- <https://nikhilghagre.github.io/day2/>

Other Project

- Built a semi-automatic multipurpose liquid dispenser for catering services and local vendors, developed in response to COVID-19 safety needs.
- Designed a 2D plotter using Arduino Uno and CNC Shield V3.0.
- Developed a smart home switch controller using ESP32 Wi-Fi module, controllable via Android device.
